

2 Port Remote CAIS Bus Expansion Module

Applications

- CAIS applications
- Distributed systems
- Multi-stage vehicles
- Enhanced reliability & redundancy

Features

- Remote CAIS expansion module
- Provides 2 additional CAIS bus expansion ports for the MCDAU-2000
- Compatible with TTC's MEDAU-2000
- "Star configurable"
- Operation to 5 MBPS
- Virtually unlimited expansion
 - 2 Ports at 60 remote units per port
- Single-point system programming
- Multiple MRCX-205's in a single unit
- Windows 95/98/NT/2000 software included

Description

The MRCX-205 module provides two (2) additional CAIS bus expansion ports for a MCDAU/MEDAU-2000 master unit. One or more MRCX-205 modules can be in a MCDAU/MEDAU-2000 stack allowing the user to build extremely large distributed data acquisition systems (large in terms of the total number of channels as well as the physical separation among units). The module can also be used to develop a "star arrangement" (central master unit with multiple remote units on the "spurs"). This results in command/response redundancy and therefore greater reliability in critical applications such as multi-stage vehicles and helicopters.
