

2 Port Remote E-Bus Expansion Module

Applications

- Distributed Systems
- Multi-Stage Vehicles
- Slip Ring Communications
- Enhanced Reliability and Redundancy

Features

- Remote Expansion Module
- Provides 2 Additional E-Bus Expansion Ports for the MEDAU-2000
- Compatible with TTC's MCDAU-2000
- "Star Configurable"
- Operation to 5 MBPS
- Virtually Unlimited Expansion
 - 2 Ports at 30 Remote Units per Port
- Single-Point System Programming
- Multiple MREX-205's in a Single Unit
- Windows 95/98/NT/2000 Software Included

Description

The MREX-205 module provides two (2) additional E-Bus expansion ports for an MEDAU/MCDAU-2000 Master Unit. One or more MREX-205 modules can be in an MEDAU/MCDAU-2000 allowing the user to build extremely large distributed data acquisition systems (large in terms of the total number of channels as well as the physical separation among units). The module can also be used to develop a "star arrangement" (central master unit with multiple remote units on the "spurs"). This results in command/response redundancy and therefore greater reliability in critical applications such as multi-stage vehicles and helicopters (slip-ring based applications).
