

4 Port Remote E-Bus Expansion Card

Applications

- Distributed Systems
- Multi-Stage Vehicles
- Slip Ring Communications
- Enhanced Reliability and Redundancy

Features

- Remote Expansion Card
- Provides 4 additional E-Bus Expansion Ports for the EDAU-20XX
- Compatible with TTC's CDAU-20XX
- "Star Configurable"
- Operation to 5 MBPS
- Virtually Unlimited Expansion
 - 4 Ports at 30 Remote Units per Port
- Single-Point System Programming
- Multiple REX-405's in a Single Unit
- Windows 95/98/NT/2000 Software Included

Description

The REX-405 card provides four (4) additional E-Bus expansion ports for an EDAU/CDAU-20XX Master Unit. One or more REX-405 cards can be in an EDAU/CDAU-20XX chassis allowing the user to build extremely large distributed data acquisition systems (large in terms of the total number of channels as well as the physical separation among units). The card can also be used to develop a "star arrangement" (central master unit with multiple remote units on the "spurs"). This results in command/response redundancy and therefore greater reliability in critical applications such as multi-stage vehicles and helicopters (slip-ring based applications).
