

Transorb board

Features

- Connects to 15-Pins MDM connector power supplies
- Provides high-level protection from transient voltage
- Protects against lightning, ESD and EMI

Description

The TSB-2000-2 provides high-level protection from transient voltage sources such as lightning, ESD and EMI. Upon reaching the clamping level, the ceramic voltage suppressors with non-linear voltage-current characteristics react similarly to back-to-back zener diodes; however, the voltage suppressors exhibit larger energy and current management potentiality.

Applications

- Flight Test Instrumentation
- Factory Automation and Process Control
- Research Measurements and Experiments
